## Multi-Cartridge Filter Housings

### PCC Series Carbon Steel

1,200 - 15,000 SCFM

#### Fabricated Carbon Steel Housings for Large Flow Applications

Facilities with high capacity air systems demand quality filtration that provides long life and critical protection. PCC Series large flow filters meet the challenge and provide contaminant protection for the premium grade desiccants used in our dryers and the contaminant sensitive applications within your plant.

#### Description

A series of 8"-20" - diameter free-standing "L" type housings fabricated of carbon steel for gas flows of 1,200 to 15,000 SCFM at 100 psig (higher flow rates at 300 psig). Designed specifically for use with Pneumatic Products high performance air and gas filter cartridges.

#### Features and Benefits

- Simple top-loading design for easy filter cartridge access. No need to disconnect drain valve or other tubing when changing cartridges.
- Low housing constructed from carbon steel in accordance with ASME code. All stainless steel construction available.
- Element O-ring seals avoid leakage paths associated with tie-rod designs which permit contamination downstream.
- Lifting lug on housing cover and simple bolt closure for ease of filter change-out.
- 1/2" NPT drain and vent ports enable housings to be used without after-purchase modifications.
- 1/4" NPT inlet and outlet pressure gauge taps accommodate preventive maintenance for aid in trouble-shooting.
- Multiple cartridge design accommodates high flow rates
- Exterior and interior painted finish for optimum corrosion protection.

*Typical gases include air, nitrogen, helium and argon. Contact Pneumatic Products for filter compatibility.*

#### Precision Fabrication

Craftsmen transform high-grade carbon steel plate into ASME approved pressure vessels rated to 300 psig. Global leaders rely on these hand crafted filter housings for the rugged durability required by applications such as power plants, paper mills, refineries, and petrochemical installations. PCC Series housings are shot blasted then receive corrosion-resistant primer and enamel top coat finish for lasting protection.

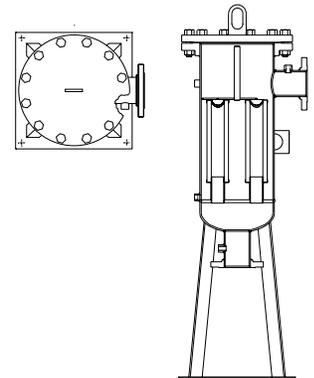

#### Applications

For use in the separation or filtration of liquid oil & water (coalescing), hydrocarbon vapors or particulates in compressed air or other gases. May be used alone or as pre- or after-filters for a Pneumatic Products regenerative absorption dryer.
